Subject: Information disclosure statement under 37 C.F.R. §1.56.

Dear Sir:

20

This is an Information Disclosure Statement in accordance with the duty to disclose information material to patentability under 37 C.F.R. §1.56. The applicant wishes to make of record the document listed on the accompanying form PTO/SB/08. It is respectfully requested that the
25 examiner initials the cited reference on the form and that it be made of record in the application and that a copy of the initialed form be sent to the applicant with the next communication from the examiner.

Since this IDS is filed before the mailing date of the first Office action,
30 consideration of the information disclosure statement is hereby requested according to 37 CFR §1.97(e).

That each item of information contained in the information disclosure statement was first cited in an Office communication from the State Intellectual Property Office of P.R.China in a counterpart China patent application on October 15, 2004, which are no more than three months prior to the filing of the information disclosure statement. The applicant requests that the examiner consider the items contained in this IDS.

According to the requirement set forth in 37 C.F.R. §1.98 and M.P.E.P. 609, the applicants are submitting a copy of the cited reference (JPH03-30332A, JPH01-186624A) and their English language abstracts hereinafter.

The abstract of the application (JPH03-30332A) is hereby presented to fulfill the information disclosure statement requirement set forth in 37 C.F.R. §1.98 and M.P.E.P. 609. The English language abstract of the application (JPH03-30332A) is listed as follows:

PURPOSE:

To suppress side etching effectively and to obtain a pattern having the approximately designed width by providing dummy masks at large spaces between the patterns when a pattern mask is provided.

CONSTITUTION:

When a pattern mask 3a is provided, dummy masks 3b and 3c are provided at the large spaces between patterns. Namely, the pattern 3a covers a part corresponding to a specified pattern. The dummy masks 3b and 3c cover parts where the large spaces remain between the patterns. When the Al thin film at an unmasked part is removed by reacting ion etching, an Al pattern 2a and dummy patterns 2b and 2c are formed. Side etching is hard to progress at the Al pattern 2a since there are the dummy masks 3b and 3c. The pattern width that is the approximately the mask width is obtained. Thus, the pattern having the approximately designed width can be obtained.

The abstract of the application (JPH01-186624A) is hereby presented to fulfill the information disclosure statement requirement set forth in 37 C.F.R. §1.98 and M.P.E.P. 609. The English language abstract of the application (JPH01-186624A) is listed as follows:

5

PURPOSE:

To make it possible to obtain a desired pattern configuration even if etching is performed under the same condition, by forming dummy pattern to make a pattern density uniform.

10

CONSTITUTION:

An etching pattern 11 and a dummy pattern 12 are formed in the same surface of a circuit element to make an etching pattern density of an integrated circuit device uniform. It is possible to obtain a desired pattern configuration even if the whole integrated circuit element are etched away under the same condition, by making the etching pattern density uniform.

Respectfully Submitted,
